

What We Offer

PHP/MySQL

One of the most popular combinations of a development and a database environment, PHP & MySQL together have forged an awesome combination to help develop amazing web based applications. It is popularly called LAMP (Linux, MySQL, Apache, PHP) Programming. We can develop and design a program/application fit for your needs. Be it a custom content management system, or a robust eCommerce system or a highly scalable community based interaction application, we can do it all.

Website with a Content Management System

A content management system (CMS) supports the creation, management, distribution, publishing, and discovery of information. It covers the complete lifecycle of the pages on your site, from providing simple tools to create the content, through to publishing, and finally to archiving. It also provides the ability to manage the structure of the site, the appearance of the published pages, and the navigation provided to the users. One of the most common use of a CMS is to manage web content. In some circles, these systems are therefore called web management systems (WMS).

Popular CMS: Joomla!, Drupal, Wordpress, WS Craft etc. We also deal with domain specific CMS. We can work with any CMS you want and also advice on which one is best for you.

eCommerce

The most sought after category on the net, eCommerce has been 'in' for a decade or so. Right from when Amazon and eBay started the trend to the very day when even the vendor below you building sells something online. eCommerce has made it all possible. We have over the past 2.5 years designed, developed and deployed a variety of eCommerce Applications such as oSCommerce©, Zencart©, CRE Loaded©, Shop Script© and many more. We can customize it to match your exact needs, and we've had a lot of clients smiling their way to the banks.

Open Source Customization

Open Source Software has been a boon to the web development arena. It has allowed everyone a taste of how a professional and robust commercial application would work. Some of the most powerful open source applications are also the most popular in their category. Joomla© (CMS), oSCommerce© (eCommerce), PHPBB© (Forum), Wordpress© (Blog) are a few examples. We can add functionality as well as design them to your liking.

Modifying Existing Script

Existing readymade scripts may not have all the features you need. We can help you customize existing scripts so as to increase their functionality and make them function the way you desire. We can also change their appearance by designing a custom 'look' for them.

Forum/ Blog Creation

As connectivity and interaction become increasingly important in the web world today, a forum or a blog becomes a must have on your website. We can implement a system which aids in improving the interactivity and connectivity of your website. We can work with most existing software commercial or open source. If you are unsure about which software is best you, write to us and we will help you right away!

Payment Gateway Customization

Accepting payment on your website can be a big hassle if you're not setup correctly. We help you plug-in your favored payment gateway with your application so that the 'transaction' between you (your site) and 'your client' can be seamless. We've worked with Paypal©, 2Checkout©, Authorize.net©, eGold©, Moneybookers© and many more. As long as the payment gateway releases its API, we can 'plug it in'.

Graphic Designing/Flash Programming & Design

Graphics Improve the overall look of your website if used tastefully. We do custom graphic designing for your various needs, may it be banners, website headers, specialized icon sets matching the theme of your website and so on. We also do flash programming and design. Flash© is an interactive media format from Adobe©, with innumerable possibilities. It can be used to create a banner, an intro or even a whole site. Flash can take a website to a whole new level of interactivity. And it is not just eye candy, it is powered by the very robust and extendable ActionScript©. Our banner designs are well thought of, to the point and are bound to increase click, which in turn mean increased sales/revenue. We take care to see that the added flash does not hamper user experience.

Print Design

We effectively combine our print design with your marketing needs so that they create the desired impact. Hence we are confidently assure you of highest design quality and the best turn-around time.

We offer designing for printed collaterals for the following:

• Brochures

- Print Advertisements
- Catalogs for your product range
- Designs of packaging
- CD ROM covers
- Magazine Covers
- T-Shirt Designs
- Wrapping Paper
- Flyers
- Basically anything and everything that can be printed!

AJAX Development

If you use Google Maps or the Gmail Web client you actually have experienced an AJAX-based solution already. AJAX, which stands for asynchronous JavaScript and XML, is a conglomerate technology that enables dynamic, asynchronous behavior on Web pages without the need for annoying browser page refreshes. Utilizing AJAX, users can interact with Web pages almost as they would with rich clients. We can help you develop custom solutions as well as add a touch of AJAX to your website to increase its interactivity.
